

Graduate Certificate in Artificial Intelligence with Machine Learning
AIGC 5002 - Machine Learning and Deep Learning

Lab 7: K-means Clustering

1. Follow the code example on blackboard and learn how to develop a full k-means solution.
2. Research online repositories for datasets (e.g., Kaggle, UCI Machine Learning Repository, Google Dataset Search).
3. Look for datasets tagged with “Clustering” or suitable for unsupervised learning.
4. Select a dataset with multiple features and no predefined labels.
5. Display the first few and last few rows of the dataset.
6. Choose the number of clusters (k) and explain your approach.
7. Apply the K-means algorithm to the dataset.
8. Visualize the clusters and their centroids.
9. Evaluate the clustering performance by showing the inertia value.
10. Interpret and discuss the results.

Enjoy!
